Why Halite rather than wood or acrylic?

Unlike wooden bathroom products, Halite is 100% water resistant. When a wood based material like MDF is used, the surface is painted but over time the paint has a tendency to crack. Without its protective covering the MDF core quickly absorbs moisture causing swelling and softening. Halite is much lighter in weight than MDF.

Halite also has good fire retardant properties and being free from formaldehyde it is also more environmentally friendly than MDF.

Acrylic products, although light, are considerably less durable than Halite, are harder to cut accurately and can easily crack or warp out of shape. Halite is also more scratch and scuff resistant than acrylic.
